

Electrical hazard awareness

Presentation of the course

The "Electrical Hazard Awareness" course was developed by a team of professionals who are dedicated to promoting efficiency and compliance with occupational health and safety standards. This 30-minute training session can be taken at any time.

Description

Today, electricity is the most widely used form of energy, as it is an essential part of everyday life. It is present in all workplaces, not only in electrical rooms, but all around us. Omnipresent, colorless and odorless, electricity is not without risk. It can seriously compromise people's safety. It is therefore important to continually raise awareness among as many people as possible in order to curb the accidents that occur and that sometimes result in worker death.

Target audience

The course is intended for workers who are not electricians and who do not perform electrical work but who operate in areas where electrical risks exist.

Prerequisites

There are no prerequisites for this course. No other training or experience is required to take this course.

Learning objectives and learning module targets

Module 1	Introduction
Module 2	Electrical hazards - Part 1
	<ul style="list-style-type: none"> › Electric shock › Characteristics of electrical current
Module 3	Electrical hazards - Part 2
	<ul style="list-style-type: none"> › Electric arc
Module 4	Live work
	<ul style="list-style-type: none"> › Proficiency
Module 5	Distance limit of approach
	<ul style="list-style-type: none"> › Sectioning procedures
Module 6	First aid
Module 7	Conclusion

Learning evaluation method

Evaluation of the required skills will be done at the end of each module. To move on to the next module, you must correctly answer all the questions in the current module. If you fail, you will need to repeat the module. You will be asked a series of true/false or multiple choice questions throughout the modules. The pass mark is 100%.

Note on integrity, plagiarism or fraud

Given the seriousness of the process and the importance of the knowledge involved in this course, the OHStraining Inc. team urges you to respect the integrity of the course and its questionnaires that you answer to the best of your knowledge, i.e., without help and without plagiarism.

Teaching and learning method

The course was created following the competency-based training approach. This concept favors not only the acquisition of knowledge, but also its integration into practice. The learning method for this course is online and is based on interactivity, dynamism and self-learning. The course will be self-paced and will take place according to the learner's availability.

The masculine gender used in this document and in the content of the modules refers to both men and women.
