

Confined Spaces

Introduction

The “Confined Spaces” training course was developed by a team of professionals who wanted to improve efficiency measures and respect for occupational health and safety standards. This 120-minute training course can be taken at any time.

Description

Carrying out work in confined spaces inevitably exposes workers to a high level of risk. It is therefore imperative to put in place the necessary and appropriate measures, according to each situation, in order to ensure the health and safety of all. These totally or partially closed places are difficult to access and often contain a hazardous atmosphere that can cause serious health problems or even death. For these reasons, it is essential to properly assess the risks related to each enclosed space. Everyone must understand and respect the procedures put in place for entering confined spaces. Each participant directly or indirectly involved in the tasks to be accomplished must have previously acquired adequate knowledge.

Target Population

This training course is primarily intended for regular and casual workers who want to perform in confined spaces. Whether you work in the construction or underground conduit field, or you are simply interested in acquiring new skills, this training is for you.

Prerequisites

There is no prerequisite for this training course. No other training or experience is required to take this training.

Targeted Learning and Targets of Learning Modules

Module 1	Introduction
Module 2	Confined Space
	<ul style="list-style-type: none"> › What is a confined space? › True stories
Module 3	Atmospheric Risks
	<ul style="list-style-type: none"> › Atmospheric risks › Toxic substances
Module 4	Explosion and Fire
	<ul style="list-style-type: none"> › Risks of explosion and fire › Explosive limits
Module 5	Biological Hazards and Other Risks
Module 6	Protective Equipment and Means of Protection
	<ul style="list-style-type: none"> › Required equipment › Atmospheric detection in the confined space › 4-gas detector

Module 7	Measuring Processes
	<ul style="list-style-type: none">› Calibration of the detector› Atmospheric readings
Module 8	Confined Space Ventilation
Module 9	Required Ventilation Time
	<ul style="list-style-type: none">› Ventilation time
Module 10	Roles and Responsibilities of Stakeholders
	<ul style="list-style-type: none">› Confined spaces stakeholders› Work permit issuer› Person in charge of entry› Industrial Hygiene Department› Entrance supervisor› Entrants› Rescue team
Module 11	Efficient Management of Confined Spaces
	<ul style="list-style-type: none">› Response program› Emergency measures
Module 12	Conclusion

Evaluation Method of Learning

The development of the targeted competencies will be evaluated so as to ensure full understanding after each of the modules. To proceed to the next module, it is necessary to correctly answer all the questions of the module in progress. In the event of failure, you will have to take this module again. A series of questions in the form of true or false or multiple choice will be asked throughout the different modules. The success threshold is 100%.

Note on integrity, plagiarism and fraud

Given the seriousness of the approach and given the importance of the knowledge gained through this training course, the team of OHStraining Inc. invites you to respect the integrity of the training and its questionnaires and suggests you to answer to the best of your knowledge, that is, without help and without plagiarism.

Teaching and Learning Method

This training course was created based on the skills training approach. This notion promotes not only the acquisition of knowledge, but also the integration of knowledge in practice. The learning method for this course is online training and focuses on interactivity, dynamism and self-learning. The training will be done at the pace of the learner and according to his/her availability.
